PROFESSIONAL SUMMARY

Final-year Computer Engineering student specializing in Big Data and Cloud Computing. Experienced in building data pipelines, ETL processes, predictive models, and dashboards. Completed internships in sales analytics, anomaly detection, and machine learning, contributing to data-driven decision-making. Passionate about applying data engineering and cloud technologies to solve real-world problems.

EDUCATION

ENSET Mohammedia

Engineering Cycle in Big Data & Cloud Computing

Mohammedia, Morocco

Sept 2023 – Present

CPGE (Preparatory Classes)

Industrial Sciences and Technologies Track

Mohammedia, Morocco

Sept 2021 – Aug 2023

EXPERIENCE

Attijariwafa Bank

Data Engineering Intern — Data Pipeline — github.com/mreckah/EcomPipeline

Casablanca, Morocco

July 2025 – Sept 2025

Built a complete pipeline (NiFi → HDFS → Spark → PostgreSQL → Grafana) to centralize sales data and provide dashboards for marketing decision-making.

Implemented **Random Forest** models to predict profit trends, supporting optimization of campaigns, pricing, and regional strategies.

Designed anomaly detection workflows with **Isolation Forest** to detect irregular sales such as invalid coupons or abnormal discounts.

Delivered interactive **Grafana dashboards** showing KPIs like sales income, units sold, and customer distribution by region, age, gender, and time.

ES Atlas Cloud Services

ML Intern — Anomaly Detection

Benguerir, Morocco

June 2024 – July 2024

Developed a comprehensive anomaly detection system for network logs to reinforce enterprise cybersecurity.

Implemented **Isolation Forest** for outlier detection and **K-Means clustering** to group anomalous traffic patterns.

Classified anomalies into **DDoS**, **brute force**, and **scanning attacks**, enabling proactive monitoring and timely incident response.

PROJECTS

Amazon Delivery Data Pipeline

Tools: Hadoop, Spark, PostgreSQL, Grafana

Built a distributed data pipeline with 3 HDFS DataNodes to process raw delivery data (Bronze) into cleaned Silver and aggregated Gold layers. Developed an AI model to predict delivery times and provide insights on agent performance and traffic. Stored results in PostgreSQL and created Grafana dashboards to visualize KPIs, enabling operational decision-making and predictive analytics.

Project repository: <https://github.com/mreckah/DeliveryPipeline>

Souk Platform — Hackathon 3rd Place

Tools: FastAPI, SQLite, OpenRouter API

Created an accessible e-commerce platform integrating an AI-powered chatbot to assist users in searching and navigating products using text, voice, and visual inputs. Implemented real-time inventory updates and optimized database queries in SQLite. The platform enhanced user experience and inclusivity, earning 3rd place in the hackathon.

SKILLS

Data Engineering: NiFi, Hadoop, Spark, Kafka, Airflow, ETL/ELT, Data Pipelines, Data Warehousing

Machine Learning: Regression, Classification, Clustering, Random Forest, K-Means, Isolation Forest

Data Visualization: Grafana, Kibana, Superset, Tableau, Matplotlib, Seaborn

Databases: PostgreSQL, MySQL, MongoDB, H2, Elasticsearch

Programming: Python (Flask, Django, Scikit-learn), Java

Project Management: Agile Scrum, Jira, Trello

EXTRACURRICULAR ACTIVITIES

ENSET Mohammedia

Chess Tournament Lead

Mohammedia, Morocco

March 2024

Organized and managed a national-level chess tournament with 50+ participants at ENSET Mohammedia. Served as organizer, referee, and team leader, coordinating logistics and event operations to ensure smooth execution.

LANGUAGES & SOFT SKILLS

Languages: English — Professional | French — Professional | Arabic — Fluent

Soft Skills: Effective Communication & Presentation · Time Management · Conflict Resolution · Professionalism · Professional Development · Team Collaboration & Leadership — Certified by **EFE Maroc**
